

## MULTIAX AT THE JEC WORLD 2017

In about a couple of weeks' time there will be the world most important event for the composite industry players.

No doubts that JEC Exhibition is the most interesting and attractive window to see the last innovations in the world of composite materials and its processes. It will be held during three days (14-15-16 March) at Paris Villepinte exhibition centre (very close to Charles de Gaulle Airport).

This show is the largest composites show in the world that covers the whole composites value chain from raw material to processors and final products. It has always been devoted to the international promotion of composite materials. JEC supports the development of composites and fosters connections and business between suppliers and users from many sectors (Aeronautics, Automotive, Marine, Construction, Sports & Leisure, Ground Transportation ...).

For MULTIAX the JEC show is considered a strategic event not only to show our last CNC machine lines or newly developed special solutions, but an excellent opportunity also to have a close look to the status and the trends of this enormous and fast changing industry.

As usual since many years, **MULTIAX will be** participating to this show, **exhibiting at the hall 5A on the stand S49.**

MULTIAX acts as problem solver in manufacturing medium/big envelope 3-5 axis CNC machining centres for composite materials (tooling boards, CFRP, FRP, honeycomb, other core materials), but also other materials related to the composite industry (aluminum, INVAR, Inconel, etc.)

Our machines are engineered to be reliable and to meet challenging operations in terms of precision CNC machining like cutting, drilling, countersinking but also milling and large envelope 3D model making.

In almost thirty years activity manufacturing high-end CNC customised machining centres, the company near Venezia, in North east Italy has always being improving and enlarging a worldwide sales and partner network to supply high standard after-sales services for customers, particularly in the aerospace, defense and automotive industries.

MULTIAX very skilled and expert team is always very motivated to give suggestions to our world customers to find optimized CNC machining solutions customised to the individual requirements of many different industries, where it is made an intense use of composite materials.
